BHI Announces Retail Store Opening Near Camp Dawson

Blackheart International has announced the opening of its first retail store on Route 7 Kingwood Plaza, Kingwood, West Virginia, in the Corner Mall at Kingwood Plaza shopping center. The Kingwood location was a logical choice for the company's initial foray into brick-and-mortar retailing due to its close proximity to Camp Dawson—one of the key Army training centers on the East Coast.

As with Blackheart International's online store, the new retail outlet will stock a vast assortment of military and tactical equipment from many of the industry's top manufacturers, as well as exclusive BHI manufactured items—from their custom-authored publications to BHI's growing line of proprietary weapon accessories. In addition to off-the-shelf purchases, the Blackheart International retail store will offer custom logistics solutions for individual soldiers and law enforcement officers to entire units and agencies.

The store will be open from 11 a.m. to 6 p.m. Tuesday through Sunday and, of course, the company's web site—www.bhigear.com—is open 24 hours a day, every day. As a GSA Contract holder, organizations able to purchase from the GSA schedule can do so at both the retail store or online.

Blackheart International, LLC has been an active supplier to Federal organizations and military units since 1999. BHI may be reached at (304) 457-1280, FAX (304) 457-1281, or email at customerservice@bhigear.com.

BHI-15

BHI-15 Rifle Platform Highlights Blackheart International's 2010 AR Weapons Program

While you may already know Blackheart International as a top-tier tactical gear and equipment logistics supplier to various U.S. Government agencies, the Department of Defense, as well as law enforcement agencies around the country, you may not be aware that Blackheart International has recently accelerated the manufacture of its own line of precision BHI-15 semi-auto rifles and assorted small arms components.

Unlike most tactical firearms manufacturers, Blackheart International takes a two-pronged approach in developing its class-leading weapons systems. The BHI-15 line of 5.56mm semi-auto firearms are developed based on the real-world combat experience of the company's principals—all of whom are former Special Forces team members and current experts in their respective disciplines. Each firearm platform is then engineered and assembled by Blackheart International's in-house master gun maker, whose extensive background includes serving as a gunsmith for the U.S. Army Marksmanship Unit, and building guns for AMU competitors to win

Olympic gold medals.

The BHI-15 (S) modernized carbine stands as the cornerstone of four-member BHI small-arms team, and serves as the building block for the up-level BHI-15 SPR sniper rifle and BHI-15 Executive Package, as well as the more conventional BHI-15 (A). Some of the key building blocks which separate Blackheart International's AR-style carbines from the "snap-together" brands littering the market include the pro-

prietary the BHI-15 billet aluminum lower receiver and the BHI-15 Rifle-Length Hand Guard System—the pinnacle of AR hand guard function and mission modularity.

The New Standard In Modernized AR Carbines

"Streamlined lethality." That's Blackheart International's new BHI-15 (S) modernized tactical rifle in a nutshell. This no frills, no hype, no bull AR-style mid-length gas

carbine was developed to ensure reliable performance and sub-MOA accuracy for the most challenging missions anywhere on the globe. As a result, the real-world tactical experience applied to the rifle's design has culminated in a precision firearm that delivers optimal combat maneuverability, accuracy and mission-specific modularity on the battlefield, the urban streets or the home front.

Blackheart International's exclusive RPG rocket backpacks offer secure, lightweight and durable portability options for RPG main bodies and rocket boosters. The RPG Quiver model shown here is just one of the many new RPG-7 accessory products the company is offering for 2010.

Updated, Improved RPG Accessories Now Available Exclusively From BHI

Answering the need by U.S. and allied military forces around the globe for more practical, modernized Rocket-Propelled Grenade accessories, Blackheart International has just announced a new line of much-anticipated products for the RPG-7 segment.

BHI-RPG-7 Boresighter

Rocket-Propelled Grenades may not be known for long-range hair-splitting accuracy, but shortening the distance between cross-your-fingers launching and effective target engagement is now possible thanks to the new RPG-7 Boresighter from Blackheart International (CAGE: 32LL6).

The RPG-7 Boresighter was designed by BHI to provide a quick, reliable and easy-to-use method of aligning optical or iron sights for the RPG-7 launcher. Simply affix the supplied string into the Boresighter's

machined crosshair grooves and insert the assembly into the end of the launch tube. The Boresighter's index pin seats into the rocket alignment notch on the launcher's muzzle for precise orientation.

Once in place, adjustment of the RPG-7's optical or iron sights is simple. Using the Boresighter's crosshairs, position the launch tube so the bore is perfectly aligned with a 300-meter target, then bring the optical or iron sights into alignment with the target.

The RPG-7 Boresighter is machined from aircraft-grade aluminum and treated to a hard anodized coating for durability. While manufacturing tolerances are precise, the Boresighter has been designed to account for varying bore dimensions to fit into RPG-7 launchers from various countries of manufacture.

BHI RPG Backpacks

The basic RPG launcher design hasn't changed much in the last half-century. Unfortunately, neither has the packs used to transport the weapon's ammo. That's why Blackheart International, in consultation with its active field members, developed a modernized and vastly

upgraded line of packs to replace the old, heavy and cumbersome canvas-based packs still in use around the world.

Starting with a fresh sheet of paper, the Blackheart International team designed a new line-up of gunner and assistant gunner backpacks using the best available materials assembled to specifications that ensure optimal performance, durability and user ergonomics.

Built from a rugged Denier nylon fabric for strength, light weight and all-weather duty, each pack features comfortable and adjustable padded shoulder straps, plus adjustable sternum and waist straps to provide a

The BHI-15 semi-auto was developed by Special Forces veterans to be the most lightweight, streamlined, accurate and reliable AR-style rifle on the market today.

Fastex buckles for the interior flaps and an adjustable Spanish buckle on the outer flap. An oil bottle/spare parts pouch is even sewn to the inside of the top flap.

Three models are currently offered.

The RPG Rocket Quiver model is the only backpack capable of containing two fully assembled rocket main bodies and attached boosters with the top flaps closed and secured. Assault teams no longer need to transport their assembled rockets exposed and "loose."

Another model designed for use by gunners is the RPG Gunner Backpack. This unit holds the same components as the Rocket Quiver, but contains four pouches—two for unassembled rocket main bodies and two for boosters.

Boasting similar length as the Gunner Backpack but slightly wider is the RPG Assistant Gunner Backpack. The Assistant Gunner Backpack can accommodate three rocket main bodies and three boosters—each stored in individual pouches for maximum protection.

Additional RPG Accessories

During the development process of the company's RPG backpack line, the Blackheart International team filled in a couple more gaps in the RPG-7 arena. By utilizing the same strong, lightweight nylon fabric and rugged strap-and-buckle system found in its backpacks, the Blackheart International developers are now offering a modernized RPG Launcher Dust Cover and a quick-adjust RPG Launcher Sling.

The Dust Cover is made with sturdy muzzle and exhaust port caps to keep dirt and other foreign objects out of the launch tube, with an adjustable strap to secure the assembly.

As for the Launcher Sling, its wide, padded strap allows the launch tube to ride comfortably across the body or slung over the shoulder, and features a quick-adjustment mechanism for lightning-fast tightening and loosening for run-and-gun operations.

As with all of BHI's proprietary offerings, the company's RPG-7 accessories are developed by folks with boots on the ground to guarantee products that deliver on quality and performance where it counts most—in the field.
